T

TAGiT

Turn YouTube watching into lasting memory with AI tagging, flashcards, and spaced repetition.

About

TAGiT is a YouTube learning tool that helps you remember what you watch. It is built around two capture modes: active tagging while a video plays, and Daily Digest summaries that collect videos watched on any device. TAGiT then turns those moments into AI flashcards, searchable notes, and exportable knowledge using spaced repetition and active recall. The app is free to start and also offers Premium options for heavier use.

What is TAGiT?

TAGiT is a YouTube learning tool that turns videos into a personal knowledge system

and a Progressive Web App, so you can capture ideas in the browser and review them in a web dashboard later. TAGiT focuses on helping you remember what you watch by pairing AI summaries with memory techniques such as spaced repetition and active recall.

The app is built around the idea that most video content is forgotten quickly. TAGiT responds by saving moments as tags, collecting watched videos into a Daily Digest, and converting both into flashcards and searchable records. It is designed for people who want a YouTube learning tool rather than a simple bookmark list.

Key features

TAGiT is a YouTube learning tool with two main capture paths and several review features:

- **Active Tagging**: capture a key moment during playback with a shortcut, using Alt+T on Windows or Linux and Opt+T on Mac.
- **Daily Digest**: receive automatic AI summaries of videos watched across devices, including TV, phone, tablet, or computer.
- **Smart filtering**: the digest excludes Music, Sports, Gaming, Entertainment, and Shorts by default.
- **AI flashcards**: generate review cards from both tags and digests for spaced repetition.
- **Chat with videos**: ask follow-up questions about a video from your digest to explore it further.
- **Search**: look up tagged moments across your library.
- **Export**: download your saved knowledge as PDF or Markdown.
- **Scheduled delivery**: choose a digest time, with a default of 7 AM.
- **Personalization**: add a learning bio and manage curated or blocked channel lists.

Because TAGiT is a YouTube learning tool, the features are aimed at retention, not just collection. The app tries to keep the content small, relevant, and ready for review.

How to use it

Install the Chrome extension if you want to use Daily Digest and in-browser capture.

Open a YouTube video and press the tagging shortcut when a useful moment appears.

Let TAGiT build summaries and flashcards from your saved moments.

Check your Daily Digest in the web app after watching videos on any device.

Review flashcards over time to reinforce recall through spaced repetition.

Search your library or export notes when you want to reuse the material elsewhere.

You can also set preferences for digest timing, your learning bio, and channel filters. That makes the YouTube learning tool more useful if you watch from multiple devices or want to keep only specific creators in your review flow.

Who it is for

TAGiT is a YouTube learning tool for people who want to learn from video without losing the useful parts.

Students who study lectures, tutorials, or explainers.

Researchers who need a repeatable way to capture insights from watched material.

Professionals who learn workflows, tools, or industry updates from video.

Lifelong learners who want a better system than leaving tabs open or relying on memory.

People who watch across devices and want a single digest of what they consumed.

It is especially relevant if you already use YouTube for education and want the app to do more than save links. TAGiT is a YouTube learning tool for anyone who wants to move from passive viewing to active retention.

What to know before you use it

TAGiT is useful, but it is not a full replacement for source material or official documentation. The AI summaries, flashcards, and chat features can be helpful, yet they may miss nuance, context, or exact wording from the original video. For anything that depends on precise instructions, policy details, or legal and medical claims, you should still verify against the original video or an official source.

The free tier includes **25 tags per month** and **3 digests per month**.

Premium is required for unlimited tagging, unlimited Daily Digests, and broader export access.

Daily Digest intentionally filters out several entertainment categories, so it is not a complete record of every watched video.

TAGiT is centered on YouTube, so it is not presented as a general-purpose note app for arbitrary files or websites.

AI processing is handled server-side, and no API keys are required.

If your goal is to remember what you watch, TAGiT is a focused YouTube learning tool with real study mechanics behind it. If you need exact quotations, official references, or a source-of-truth archive, use the original video and related documentation alongside TAGiT rather than relying on the app alone.
